NZ Citizen — Full Work Rights in Australia & New Zealand · Open to relocating to Melbourne or Sydney

SUMMARY

Software engineer with 15+ years of experience specializing in mobile — building multiplatform clients, SDKs, and the cloud systems behind them. Experience spans real-time streaming infrastructure, agency-scale white-label delivery across concurrent codebases, building an Android engineering organization from zero, native iOS payments delivery, consolidating a no-code design tool's interaction engine into a single Kotlin Multiplatform codebase, and architecting a modular Android app serving multiple markets from one codebase.

CORE SKILLS

Kotlin Multiplatform — shared core logic across iOS, Android & Web (KMP/KMM)

0 → 1 Org & Product Building — built an Android org & its first QA process from zero

Performance & Algorithms — memory, rendering & load-time optimization

Modular / Multi-Market Architecture — one codebase serving multiple markets

Cloud & Real-Time Infrastructure — AWS-based live broadcast & streaming systems

Cross-Platform Leadership — embedded, mobile & cloud simultaneously

EXPERIENCE

Woolworths — Senior Android Developer

2024 – Present

- Own NZ market-entry execution into a shared AU/NZ codebase and built a BFF-driven CMS component system so marketing content ships without app releases
- Led the Gigya → Auth0 identity migration, including a deliberate mid-rollout rollback and a safe re-landing afterward
- Delivered a Room database schema migration (v25 → v26) with full test coverage for a multibuy pricing feature
- 197 pull requests merged and ~29K net lines of code shipped over 24 months

StudioXID (ProtoPie) — Senior Software Engineer

2022 – 2024

- Consolidated ProtoPie's interaction engine (trigger-action rules, rendering, animation) into a single Kotlin Multiplatform codebase shared across iOS, Android, and Web
- Extended KMP to tvOS and watchOS, and shipped a visionOS build within ~2 months of Vision Pro's general availability
- Cut memory footprint 20%, improved interaction-engine throughput 10–15%, and improved initial content load time 10–20%

PIXO — Senior Mobile Engineer, Android Lead

2020 – 2022

- Solo-shipped Focus Keeper (Kotlin Pomodoro app) to Google Play in ~7 weeks, then founded the Android department and built the company's first QA process
- Led the org's first Kotlin Multiplatform rollout (LogoMaker, 11 months), building a shared Billing/Analytics/Network/Storage library across a 4-repository platform split
- Adopted Jetpack Compose in production ~4 months after its 1.0 GA; pivoted from a self-built CMS to headless CMS (Contentful) for app-release-free content updates
- Reviewed 250+ team pull requests across the org's Android lifetime

Xplor Technologies (Clubware NZ) — Senior Mobile Engineer

2022

- Owned the "Pay Overdue" feature end to end on SwiftUI, integrating a WebView-based payment-provider flow with a custom native numpad UI; shipped the Payment Method feature alongside it
- 305 of the app's 5,402 total commits during a ~7-month engagement, backed by automation test coverage across backend and payment-provider paths

FrequencyNZ — Contract Full-Stack Developer

2020

- Shipped COVID-19 contact-tracing across React/Redux, C#/.NET Azure Functions, Kotlin (Android), and Swift (iOS) in a two-month contract (171 commits across all four stacks)

Coretex — Software Engineer (Contract)

2019 – 2020

- Built Android fleet-management features backed by AWS Lambda serverless functions for a production fleet-tracking product, owning both client and backend service layers

Marker Studio — Senior Software Engineer

2016 – 2019

- Shipped a production BLE/iBeacon luggage-tracking feature (Estimote SDK, custom radar view) across 4 white-label Serko apps for an NZX-listed travel client; hardened security with TLS certificate pinning and encrypted (Jasypt) PIN storage
- Shipped the org's first production Kotlin app (WorldVision, Sept 2017) ~4 months after Kotlin's Google I/O announcement
- 495 commits across Serko's 11 white-label brand variants; 164 commits across Adeption's 3 brand variants

YESSHOP — Software Engineer (2015–2016) — built backend systems end-to-end for a TV-based home shopping platform on the company's in-house X2Framework, covering inventory management and order dispatch.

Emcor Consulting — Technical Lead (2015) — led a 6-person development team delivering client projects across POS and web/mobile services.

Megatel — Senior Software Engineer (2012–2015) — rebuilt a real-time IPTV service end to end: set-top box, iOS/Android apps, and an AWS-based live-broadcast relay pipeline.

Zenitum, Seoul — Senior Researcher & Software Engineer (2009–2011) — developed high-speed Natural Feature Tracking AR engines optimized for ARM cores; lead architect and iOS developer for corporate AR projects, including work for Hyundai Capital.

EDUCATION

Hanyang University — Graduate School

2009–2010

Graduate Coursework, Intelligent Robot Engineering — coursework completed; thesis not submitted

Dankook University

1992–2003

Bachelor of Engineering, Electronic Engineering — NZQA-assessed as equivalent to a NZ Bachelor of Engineering Technology, Level 7

OPEN SOURCE & PERSONAL PROJECTS

PinBlock.mobile — cross-platform (KMP) PIN block encoding/decoding for payment card processing

Jetpack Compose Dev Challenge — Google's official #AndroidDevChallenge submission, pre-1.0 Compose adoption

SVGView (open-source) — fixed two rendering bugs in an 854★ SwiftUI library (PR #46, #47)

RideFit — Android POC (TTS, Firebase Remote Config, Fastlane pipeline), in alpha testing
